

01 — INTRO

0:00 – 0:30

Hey — I'm Mihir Misran.

I'm not someone who waits until everything's perfect to start. I build things, break them, figure it out — and that's kind of become my whole approach to everything.

I'm into tech, startups, and real problems. And the one thing I keep coming back to is this:

You don't need to feel ready. You just need to begin.

02 — PITCH

0:30 – 1:00

(Hold the clock.)

So — this is Google Focus Clock.

And look, it's not just a clock. It's built for one specific problem — distraction. Because in a world that's constantly pulling at your attention, most tools just add to the noise.

One tap, and it doesn't just silence your phone — it syncs with every device around you. Your laptop, your tablet, everything nearby goes quiet. It builds a bubble. A complete, distraction-free environment — so your space actually matches your intention.

And then it tracks your attention over time and gives you real insights. Because the problem was never time. It was always attention.

03 — CAMPUS INSIGHT

1:00 – 1:30

Here's something you wouldn't notice about my campus from the outside —

The people here are genuinely capable. Like, really capable. But everyone kind of stays in their own lane. Their own group, their own project, their own bubble. There's so much talent — it's just fragmented.

So if I'm here, I'm connecting people around real problems. Small teams, fast execution, something working by end of week. That's where things actually happen.

04 — FAILURE

1:30 – 2:00

Back in 10th grade farewell — I was called up on stage. No warning, no prep. Nothing.

I walked up there and everything just... went blank. My mind, my words — gone. And everyone laughed.

That moment stayed with me for a long time. It stung.

But what it actually taught me was this — panic happens when you're not grounded. When your mind isn't anchored to the moment, the moment swallows you.

So now, whatever I do — I stay focused before I show up. I prepare, I center myself, and I make sure that when the moment comes, I'm already there. Not catching up.

05 — CHALLENGE

2:00 – 2:40

Here's what I'd actually do — and it's not a campaign.

Most people don't know Gemini has Anti-Gravity. It's genuinely underrated, and almost nobody on campus has heard of it. That's exactly why it works.

So here's the plan — seven days, simple:

Day 1 – 2

I sit with a handful of people and show them exactly how Anti-Gravity works. Hands-on, real examples — not a presentation.

Day 3 – 4

I show them vibe coding with Gemini — how you can build real, functional things fast, even without a strong coding background. That's when eyes open.

Day 5

I let them play with it themselves. No hand-holding. Just them and the tool.

Day 6

They show someone else. That's the only ask.

Day 7

I'm not promoting anything anymore — because they can't stop talking about it themselves.

That's how it spreads. Not through me pushing — through people genuinely excited about what they just discovered.

Ending

2:40 – 3:00

(Pause. Steady eye contact.)

And honestly — that's just how I think about building anything.

Start small. Make it actually useful. And let the results do the talking.
